

Ostendio's MyVCM™: Cybersecurity Simplified

Ostendio's MyVCM platform streamlines the way your organization manages security, compliance and risk. Ostendio's award winning software provides an enterprise view of your cybersecurity program, using behavioral analytics to drive employee and vendor engagement.

Cybersecurity isn't just IT's role anymore. A major threat to any company's cybersecurity program is human error. Ostendio's bottom-up security provides a workflow solution which engages every employee and manages all aspects of your security. You can analyze your security posture at any time – and all in one place.

With MyVCM, you are always prepared for a security review or audit.

Unlike Other Cybersecurity Products MyVCM:

- ✓ Champions a bottom-up approach to security, engaging every employee in your organization, and creating a culture of security
- ✓ Uses behavioral analytics and gamification to encourage participation
- ✓ Offers automated workflow management with prioritization based on risk level

How Does It Work?

MyVCM's workflow management solution provides a range of tools to manage your entire information security, compliance and risk management programs, creating a unified cyber strategy.

MyVCM scales instantly, supports multiple standards and regulations, and offers 3rd party integrations.

Our customers use MyVCM to reduce risk, accelerate sales cycles and improve efficiency.

Automate Processes

Instead of time-consuming, manual spreadsheets, MyVCM automates processes, reducing paperwork and administrative overhead. With scheduled audits and audit submission tracking, approval and acknowledgement workflows and prioritization based on risk-level, everything is fully auditable.

Actionable and Transparent Reports

Our Reports module provides board level reporting, with actionable intelligence based on cross company activity. Created in real-time, our reporting feature allows you to easily demonstrate your compliance to internal and external auditors.

Training Assessment

Security awareness training is essential to creating a culture of security within your organization. With our training module you can add, edit and assign different training. You can require acknowledgements from your employees, and run audit reports to see who has completed what training.

Assets and Audits Management

MyVCM allows you to track and manage all of your assets including software, hardware, PaaS and SaaS. You can run audits against these assets, as well as against documents, training, locations, or just a general audit.

Reduce 3rd Party Risk

3rd party vendors can add significant risk to your organization. MyVCM clients significantly reduce the number of vendor audits they perform, as they are able to see vendor performance continuously, and in real time. MyVCM enables you to accelerate vendor security assessments, privacy compliance reviews and implementation.

Full Template Library

Along with the MyVCM software, you also receive a robust template library of common policies and procedures, as well as some training templates.

MyVCM not only helped us set up our information security framework, but we could tag relevant activity and then share it with our customers, giving them the confidence that we were operating responsibly. MyVCM has reduced the sales cycle for us by at least 3 months.

– Anish Sebastian, CEO, Babyscripts

Ensuring Customer Success with MyVCM Professional Services

If resources are limited, we have a number of different professional services available for deployment of MyVCM solutions. Each account comes with a dedicated account manager. Security experts can be exclusively assigned to assist with the creation, development, design, execution and analysis of your current or future security and compliance programs.

Ostendio's award-winning MyVCM Cybersecurity and Information Management platform provides organizations with an enterprise view of their cyber security program. MyVCM uses behavioral analytics to drive employee and vendor engagement.
